

ROP

Abstract 148

MANAGING ROP COMPLICATIONS

Ocampo Moreno I.*

HOSPITAL GENERAL DE MEXICO DR EDUARDO LICEAGA ~ MEXICO CITY ~ Mexico

ROP is a common disease around the world but its surgical management can vary greatly due to associated systemic disease, particular ocular conditions and surgeon's expertise. By presenting this video we propose a way to prioritize surgical steps in order to obtain successful results.

in the video we present a case of a extreme premature infant and the surgical outcome after performing bilateral vitrectomy for aggressive ROP

retinal attachment

preserving ocular structures and visual rehabilitation must be main objectives when treating ROP
